NATIONAL PARKS												
Like all countries concerned about protecting and developing their natural heritage, Québec has developed a network of international-calibre parks. These protected areas are exceptional or representative of the natural regions of Québec where every form of commercial harvesting is prohibited for the benefit of present and future generations. Hunting is prohibited here. Open to the public, parks offer visitors nature interpretation programs and services related to the practice of outdoor activities.

WILDLIFE RESERVES												
Wildlife reserves promote the conservation, development and use of wildlife in accordance with the principles of sustainable development. They propose first and foremost wildlife-related activities but also outdoor activity products that are compatible with their vocation, such as vacationing, camping, canoe camping, etc. Wildlife research is carried out in these reserves to improve wildlife management throughout Québec. Wildlife reserves also encourage an integrated management of natural resources.
